Types of Logistics

1. **Procurement logistics** is the buying or purchasing of goods or services.
2. **Production logistics** refers to the planning, management and control of the internal storage, handling and transport processes of purchased parts, auxiliary materials, raw materials, spare parts, operating materials and other products that are required for production within a company.
3. **Sales logistics** ensures that products are delivered to customers on time for retail sale or distribution.
4. **Reverse logistics** is a process whereby companies can become more environmentally efficient through recycling, reusing, and reducing the amount of materials used.
