

An Example

If you want to have 165 samples/subjects from all 7 faculties, ...

Another Example

- **Stratified Random Sample Method**

Probabilistic Sampling – cont'd

4. Cluster Sampling Method:

Cluster sampling is sampling in which groups, not individuals, are randomly selected. To be part of a cluster, all the members of selected groups must have similar characteristics.

This is performed by choosing a random sample of subgroups, and all members of the subgroups become part of the sample.
